

Approved Purposes – Processor

The following are the approved purposes that a Processor may deliver Used Tires or Tire Derived Products (TDP) to. Note that delivery to an Approved Purpose does not necessarily guarantee payment of a Processing Incentive (PI). Refer to the Hauler Guidebook for more information on PI eligibility.

- Delivery to a registered Processor
- Delivery to a Reuse end-use (retreading or sale as a used tire)
- Delivery for use in the manufacturing of a finished product using crumb rubber as a raw material
- Delivery for use in a specified and permitted application to land (e.g. sports field infill, as Tire Derived Aggregate in road construction, as landscape mulch)
- Delivery for use in blending crumb rubber as a modifier or material supplement with other materials to produce a finished product (Rubber Modified Asphalt, blending of crumb rubber with virgin rubber in the production of retread stock, blending of crumb rubber with plastics in the production of finished products)

Notwithstanding any of the above no end-use which derives energy value or which results of the application of the Used Tires/TDP to land is an Approved Purpose without prior approval in writing by OTS.

NOTE: In all cases the Processor is responsible for providing supporting information demonstrating Used Tires and TDPs are ultimately delivered to an Approved Purpose, including in situations where the receiver/customer/purchaser of the Used Tires or TDPs subsequently supplies them to another customer.
